State-of-the-art software for noise calculation

DataKustik

Cadna A for Windows™ is an easy-to-use, yet powerful program for the accurate prediction of noise levels near industrial sites, sports and leisure facilities, roads, railways, airports or any other noise producing activity.

Ease of data entry: sound emission, landscape configuration and contours, roads and barriers make project input simple.

Calculation and documentation of noise levels in accordance with national and local regulations and presentation of results with color-coded noise contour maps, noise source rankings and sound levels at specified locations make Cadna A the perfect noise level evaluation tool. Cadna A – THE environmental noise software that works for you. Call today for a demo!
